

# Tool Transfers Using an Asset Tag or Barcode

ONE-KEY™ makes it easy for you to transfer barcoded and tagged tools and equipment across jobs.

The in-app scanner within One-Key lets you [assign](#) Asset ID Tags, and to find where a tagged or barcoded item belongs by [scanning it](#) using your smartphone's camera. This eliminates the need for expensive standalone scanning hardware. In addition to quick lookups, One-Key's barcode reader also allows you to easily transfer tagged and barcoded items between jobsites.

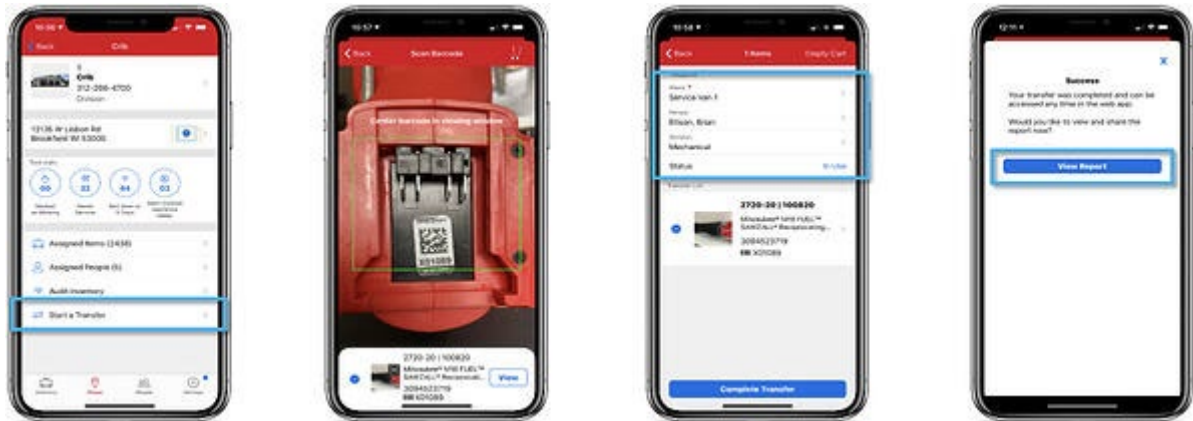

In this article, we'll show you how to complete a tool transfer using an [Asset ID Tag](#) or barcode.

## Launch the One-Key Mobile App

- Your inventory will open. Along the bottom menu, tap “**Places.**”
- Select a project or job you want to transfer items *from*.

## Transferring Tagged or Barcoded Tools and Equipment

- Once in your place's details, scroll down and tap **"Start a Transfer."**
- Your inventory items at this place will load. Tap the search icon to access the scanner, then the **'Scan Barcode'** button.
- Center your item's asset tag or barcode in the viewing window by moving your item under your device's camera.
- When the item description appears, tap the **'Add'** button. Repeat this process as many times as you need until you've got everything in the cart for your transfer.

Once the cart is full, finish the [transfer process](#) by selecting a destination and assignee. Once that's completed, you can send a confirmation of the delivery to whoever needs to know. We'll save a copy for you in your transfer history that you can access whenever you need.

One-Key's scanner functionality makes transferring equipment with Asset ID Tags or barcodes fast and simple.
